

SafeBot /Refurbishment kits

Refurbishment kits for safe deposit systems of any kind – including automatic 24/7 Self Service Safe deposit systems

Modernising safe deposit systems

„A new safe deposit system is not always necessary“

We have developed the SafeBot /Refurbishment kits to be able to modernise and maintain nearly every **8-hour and 24-hour Safe deposit system** built in Germany in the last 25 years with recent and long-term available spare parts.

Automatic locker storage system for the extension of an 8-hour safe deposit system

Your system is not listed? Call us, so that we can find a solution together!

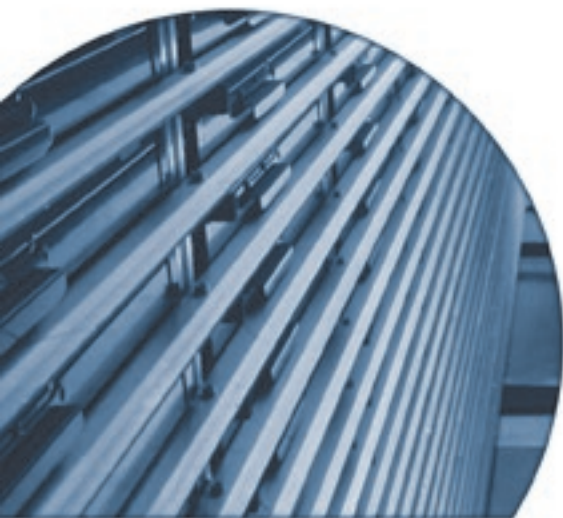

SafeBot /Refurbishment kits

Since 2010 we have already been rebuilding branches with automatic safe deposit systems by different producers. Adding to the software we have also developed all mechanical and electronic components needed to supply your safe deposit system for years to come.

Benefits of the Refurbishment kits

By switching and updating all power units and movable control lines it is possible to technically update safe deposit systems of the older generations.

Regulations and software that are independent of the manufacturer let our system also easily adopt to complicated situations. The technically reasonable and well operable access terminals facilitate the handling for the clients and even dispose of an appealing outer appearance.

Service and maintenance

Through the usage of the same power units and controls in the various SafeBot Refurbishment kits the number of different types of spare parts is kept low.

A long-term availability of spare parts arranges for investment safety. We also offer different maintenance agreements that will surely match your branch situation.

SafeBot /Extend

For mechanical safe deposit systems our Extend variation offers the possibility to extend the existing lockers by an 8-hour Self service safe deposit system. This way you can save labour expenses and offer your clients a plus of convenience and security.
